

Vocera® 4.1 System Software

The leading hands-free, instant communication solution for mobile workers adds new features that expand the user experience

The Vocera® communications system is a software-based solution that allows users in any 802.11b/g-networked building or campus to communicate instantly, hands-free, with team members. The Vocera communications system, which users access through lightweight, wearable Vocera badges and simple voice commands, allows mobile workers to give and receive critical information quickly and easily, helping them to better perform their jobs.

The Vocera system software version 4.1—the latest software release—builds on the existing Vocera platform and extends Vocera functionality beyond the wireless network by providing access from traditional phone systems. Equipped with new features and improved functionality, Vocera 4.1 makes it easier for mobile workers and administrators to communicate with team members, other groups, and across the organization, saving time and steps to allow for more time with patients and customers.

:: What's New

Enhanced Core Product Features

- **Device Management.** Vocera 4.1 system software maintains important information about each Vocera badge including device label, serial number, MAC address, group ownership, tracking date, and a notes field. Now when a Vocera device has been off the network for a specified period of time, the Vocera report server software can send an email alert to the group manager and/or system administrator, reducing the risk of asset loss. This feature also allows group administrators to view the current status of Vocera devices owned by their group.
- **Automatic Scheduled Reporting.** Vocera 4.1 system software automatically delivers Vocera system reports to the appropriate people, via email, speeding up information delivery, analysis and decision making. Reports can also be posted to a shared drive for broader access.
- **Scalable and Redundant Telephony Server.** The 4.1 Vocera telephony server (VTS) provides critical redundancy, increased capacity per site, and an email alert notification system that reduces downtime.

Time-Saving New Applications

- **Mobile Dictation.** The mobile dictation add-on license available for Vocera 4.1 system software allows users to dictate information directly into their Vocera communications badge. The voice message is then sent directly to the user's transcription service or dictation solution.
- **Phone Access to Genie.** Vocera 4.1 system software allows off-campus and non-badge users (such as doctors, IT personnel, and clinical managers) to log in to the Vocera system via any phone, so they can send and listen to messages, call users and groups, and send broadcasts from any location, any time. This add-on feature provides Vocera functionality from traditional phone systems.

The AHA has endorsed the Vocera Communications System

New Intelligent Workflow Capabilities

- **Staff Assignment.** With Vocera 4.1 system software, nurse administrators can quickly and easily assign nurses and clinical staff to specific beds and Vocera role-based groups. Staff assignment will be available in Q1 2009.
- **Add Me to Multiple Groups.** A new voice command to quickly add yourself to multiple groups. There is also a command to remove yourself from multiple groups.
- **Intelligent Answer.** Now when users receive an incoming call, Vocera 4.1 system software announces the reason for the call, so they can instantly decide whether or not to take the call. For example:

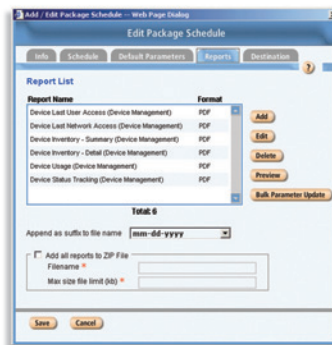

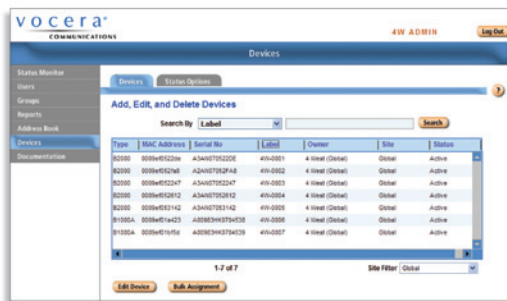

“Can you take a call to 4 West Bed 1 from Doctor Jones?”

“Can you take a phone call from Doctor Smith?”

- **Enhanced Site-Based Voice Call Flow.** Vocera 4.1 system software provides enhanced site-based voice call flow to ensure that calls and broadcasts to groups are responded to by someone at the same site as the group, thus ensuring a response by someone who can quickly assist.

Vocera 4.1 system software is available as a free upgrade to customers with current maintenance contracts. The device management, scheduled reporting, and report server are part of an Administration Suite and is included with enterprise licenses and available for purchase with standard licenses. The mobile dictation and phone access to genie applications are licensed on a per named user basis and sold in blocks of 25.
